

## CHAFING DISH USER INSTRUCTIONS

Chafing dishes are a great way to keep your food warm for an event.  
Here are a few tips for easy use of the units!

- Place frame on a level surface or table where you will be serving the food
- Fill the water pan halfway with HOT or boiling water (the sterno fuel **will not** warm up cold water)
- Slide open lid of fuel cover and light fuel with long handled lighter
- Place food insert on top of water pan, making sure water doesn't spill over the edge but is coming up the sides of the water pan
- Make sure there is always water in the pan to avoid burning
- Sterno fuel will last approximately 2 hours, you may purchase extra fuel if your event will be longer
- Make sure to extinguish and discard of fuel safely
- The food insert may be used to cook your food in or to reheat before you put into the chafing unit
- Please rinse food from the food inserts before returning

**Have a great event!!!**
